Jossy Chidi

SOFTWARE ENGINEER | BACKEND | FULL STACK | PLATFORM / CLOUD | SECURITY & APPLIED AI

Calgary, AB, Canada | +1 (825) 526-2848 | jossy.wike@gmail.com | jossychidi.tech | github.com/Jossy-dev | linkedin.com/in/jossy-chidi

PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience building and supporting production web applications, REST APIs, asynchronous services, cloud-hosted systems, security-focused platforms, and AI-enabled products. Strong hands-on experience with Python, TypeScript, JavaScript, React, Next.js, Node.js, Express, Django, Django REST Framework, Flask, SQL, PostgreSQL, MongoDB, Supabase, Redis, AWS, Docker, Kubernetes, CI/CD workflows, automated testing, and Linux. Experienced taking products from problem definition through architecture, implementation, testing, deployment, monitoring, incident response, and iteration. Recent product work includes Callstrix, an AI phone receptionist SaaS for small businesses, and Vertikal, an LLM-powered travel planner. Brings strong debugging, system-design, security, and product-engineering skills.

TECHNICAL SKILLS

- Languages & Full Stack: Python, TypeScript, JavaScript, SQL; React, Next.js, HTML/CSS, Tailwind; Node.js, Express, Django/DRF, Flask.
- APIs & Async Systems: REST APIs, third-party integrations, Redis, BullMQ, background workers, queues, retries, failure handling, WebSockets, event-driven workflows.
- Data & Cloud: PostgreSQL, MongoDB, Supabase, Redis, SQL optimization; AWS, Docker, Kubernetes, Linux/Ubuntu, systemd, CI/CD workflows.
- Quality & Reliability: unit/integration testing, TDD, code review, debugging, production incidents, root-cause analysis, health/readiness checks.
- Security & AI: ClamAV, YARA, Wazuh, validation, rate limiting; OpenAI/DeepSeek APIs, LLM workflows, structured outputs, AI coding agents, conversational/voice AI product workflows.
- Practices & Tools: SOLID, modularity, Agile, architecture reviews, Git/GitHub, Jira, Confluence, Zendesk, technical documentation.

PROFESSIONAL EXPERIENCE

Engineering Lead | ViroVanta (Cybersecurity) | Feb 2026 - Present

- Lead end-to-end engineering of a production malware and threat-analysis platform across APIs, asynchronous workers, data services, security tooling, reporting, deployment, and operational support.
- Designed asynchronous scan processing with Node.js, Express, BullMQ, and Redis, separating API and worker workloads to improve fault isolation, recoverability, and reliability for long-running jobs.
- Use Supabase as the backend/data service and define service boundaries, data flows, validation rules, queue behaviour, retries, failure handling, and processing states for file, URL, and website scanning workflows.
- Integrated ClamAV and YARA detection workflows and built security controls including input validation, rate limiting, signed reports, and secure handling of untrusted content.
- Built health/readiness checks and production diagnostics to surface dependency, startup, worker, and processing failures earlier and reduce silent failures.
- Investigate production issues across application, service, data, queue, network, and infrastructure layers using logs, runtime behaviour, queue state, and end-to-end workflow testing; implement root-cause fixes and verify recovery.
- Make architecture decisions, review technical approaches, document failure modes and implementation trade-offs, and guide contributors through ambiguous engineering problems.
- Use AI coding agents for investigation, debugging, and repetitive implementation while reviewing, testing, and refining generated output before release.

Software Engineer | Rexera (Real Estate Technology) | Jan 2024 - Jun 2024

- Built and deployed production applications with React and Python/Flask across frontend, REST APIs, application logic, data access, and cloud-hosted services.
- Created unit and integration tests reaching approximately 90% coverage, strengthening regression protection and release confidence.
- Worked with AWS and Kubernetes production environments to improve scalability, reliability, and operational uptime.
- Supported production incidents by reproducing defects, tracing failures across application, API, data, deployment, and infrastructure layers, and collaborating on durable fixes.
- Participated in architecture reviews, peer review, technical documentation, debugging, and iterative Agile delivery.

PROFESSIONAL EXPERIENCE (CONTINUED)

Software Engineer Intern | Rexera (Real Estate Technology) | Jun 2023 - Dec 2023

- Developed production frontend and backend functionality using React and Python/Flask.
- Built and tested REST API workflows, integrations, and application logic under engineering review.
- Strengthened debugging, test-writing, code-review, and production-support skills while contributing to architecture and reliability improvements.

Full Stack Developer Intern | Tradift (E-commerce) | Mar 2021 - Apr 2023

- Built customer-facing features with React, Django, and Django REST Framework across frontend, API, authentication, and database-backed business workflows.
- Integrated third-party APIs and supported end-to-end data flow between external services, backend logic, databases, and customer-facing interfaces.
- Optimized SQL queries and database schema patterns, reducing response times by approximately 25%.
- Worked in iterative Agile delivery with testing, debugging, code review, and incremental releases.

SELECTED ENGINEERING PROJECTS

Callstrix - AI Receptionist SaaS | Independent Engineering Project | callstrix.com

- Built an AI phone receptionist product for small businesses that can answer incoming calls and handle common customer conversations when a business is unavailable or chooses AI-first call handling.
- Designed customer-facing workflows for business-specific question answering, appointment booking, and configurable call-handling behaviour.
- Built the product for English and French customer interactions, expanding usability for Canadian businesses and bilingual service environments.
- Developing Callstrix as a subscription SaaS product, with product decisions spanning onboarding, business configuration, recurring service delivery, reliability, and customer experience.
- Own the product end to end, including architecture decisions, implementation, integrations, debugging, testing, deployment, and ongoing iteration.

Vertikal - AI Travel Planner | React, Node.js, OpenAI API, DeepSeek API

- Built an AI-powered travel-planning application that generates personalized itineraries through a conversational workflow.
- Implemented LLM integration, prompt-driven workflows, structured output handling, history tracking, validation, error handling, and PDF export.

EDSU Medical Student Association Platform | React, TypeScript, Next.js, Node.js, MongoDB

- Led a small team building a dues and payment management platform used by more than 1,000 students.
- Built responsive workflows and notification features across frontend, backend, and database components.

Klotter - Real-Time Social Platform | Python, Django REST Framework, Redis, WebSockets

- Built backend services for real-time messaging, personalized timelines, and trending-topic discovery.
- Used Redis and WebSockets to support low-latency, event-driven user experiences.

SYSTEMS, INFRASTRUCTURE & SECURITY LABS

- Wazuh Security Monitoring Lab: built an Ubuntu-based SIEM lab for endpoint monitoring, log visibility, alert review, Linux administration, and security-event troubleshooting.
- VPS Runtime & Container Lab: configured and troubleshot Docker containers, custom networks, persistent services, systemd-managed processes, Redis-compatible services, health endpoints, ports, and recovery workflows.
- Virtualization & Networking Lab: configured Ubuntu and Kali Linux virtual machines and practiced SSH, TCP/IP, DNS, DHCP, ports, client/server connectivity, and isolated-systems troubleshooting.

EDUCATION & CERTIFICATIONS

- BSc Computer Science - Edo State University Iyamho (EDSU) | 2019 - 2024
- ALX Software Engineering Program - Holberton School | 2021 - 2022
- CompTIA Network+ - Certified
- ISC2 Certified in Cybersecurity (CC) - Oct 2025
- Google Cybersecurity Certificate - Feb 2026

LOOKING FOR

- Primary: Software Engineer, Backend Engineer, Full Stack Engineer, Product Engineer, Platform Engineer, DevOps / Cloud Infrastructure Engineer, Security Engineer, Applied AI Engineer, AI Application Engineer, Voice AI Engineer, Conversational AI Engineer.
- Adjacent: Founding / Startup Engineer; Technical Solutions or Support Engineer roles where coding, APIs, integrations, cloud systems, production troubleshooting, and broad ownership are core.
